

Wiring Instructions for Tiger Shark Remote Control

Tiger Shark remote controls are our preferred choice for Elevator lifts due to the anti-corrosion technology they include. This control box is manufactured by Tele-Radio, LLC. (866) 629-0780, www.tigershark.tele-radio.com

Tele-Radio has a very well written Manual and Installation Instructions (version 2.0) available on their website. Choose the Tigershark V.II from the Manual button. This manual is very thorough and consequently, very long. We are writing this brief note to point you to the relevant pages for installing this remote control with our lifts. Please read the Tiger Shark Manual for proper operating instructions.

Connection of a Limit Switch to the Control Box	pg 16
Wiring the Control Box without a Limit Switch	pg 22
Wiring the Motor for 120 VAC	pg 26 or 28
This is identical to the motor wiring instructions in the lift installation manual.
